⚠ WARNING

Do not exceed product rating or tow vehicle lamp load rating, whichever is lower.

Be sure not to lay tools across the positive terminal (typically noted with red covers or a red '+' symbol). This can cause a ground to short leading to sparks and/or electrical shocks.

The battery connection must be fuse-protected, 10-amp max. Exceeding the product rating can cause loss of warranty, overheating and potential fire.

NOTICE

Before you begin installation, read all instructions thoroughly.

Proper tools will improve the quality of installation and reduce the time required.

All steps must be followed to ensure the product will function properly. Once installed, test for proper function by using a test light or connecting a properly wired trailer.

Maintenance

Periodic inspection of all wires and connections should be performed to ensure there is no visible damage or loose connections.

Step 1

Locate the vehicle battery in the engine compartment on the passenger side of the vehicle and disconnect the negative battery terminal. Be sure to fasten this wire down and away from the battery during installation.

Step 2

Looking down between the air filter, the driver-side front fender, and the firewall, locate the harness in the opening above the front wheel well. The connectors will match the connectors on the custom harness. Separate the connectors taking care not to damage the locking tabs.

Step 3

Install the customer harness between the separated connectors. Make sure the connectors are fully inserted with the locking tabs in place.

Step 4

Locate a grounding point such as an existing screw or bolt in the frame of the vehicle or drill a 3/32" pilot hole. The area should be free from rust, dirt, and paint (abrasive pad/paper to remove rust and paint). Secure the white ground wire with the ring terminal on the existing fastener or with the provided ground screw.

⚠ CAUTION

Check for miscellaneous items that may be hidden behind or under any surface before drilling to avoid damage and/or personal injury

Step 5

Locate a flat clean surface that is out of the path of spray and debris from the rear wheels and road. Adhere the black converter box using the provided double-sided tape and/or zip-ties. Failure to mount the box in a protected area can cause loss of warranty, product failure, overheating and potential fire.

Step 6

Route the black power wire from the battery as shown in the provided 'Powered Converter Lead Instruction Sheet.'

NOTICE

Once 12 volt power wire is connected to the harness verify that the harness is functioning by attaching the battery and testing.

Step 7

Route the wiring down under the vehicle towards the cab and to the headache rack. Secure the wire with cable ties to hold the harness in place and keep it away from hot or moving parts.

Step 8

Once the headache rack is installed, route the light harness end from the headache rack between the cab and the box. Attach both of the mating connectors from each harness, ensuring the tabs are locked in place.

WARNING AVERTISSEMENT / ADVERTENCIA

Route 12 GA wire to vehicle battery location, taking care to avoid any pinch points and hot or rotating components.

Acheminer le câble de calibre 12 à la batterie du véhicule en prenant soin d'éviter les points de pincement et les éléments chauds ou pivotants.

Pase el cable calibre 12 hacia la ubicación de la batería del vehículo, con cuidado de evitar atascos y componentes calientes o giratorios.

WARNING AVERTISSEMENT / ADVERTENCIA

To avoid personal injury or property damage, check for miscellaneous items that may be behind or under any surface before drilling.

Pour éviter les blessures et les dommages matériels, vérifier les divers articles qui peuvent se trouver derrière ou sous la surface avant de percer.

Para evitar lesiones personales o daños materiales, verifique que no haya ningún elemento detrás o debajo de la superficie antes de perforar.

NOTICE AVIS / AVISO
